Q: Please comment about any of the preceding questions and/or offer suggestions for the improvement of this course.

- 1 This was one of my best classes this semester because of the way the professor helped us. He always made time for any questions and addressed them in full, and would even give us resources to help us understand further. He was extremely helpful in helping in and outside of class.
- 2 Your module instructions are very helpful
- 3 This class was great and the instructor was very passionate about the topics and always more than willing to help. He did a great job at making sure all students felt comfortable asking for help and had a good understanding of the material.
- 4 I think that the grading is a little harsh. I am trying my very best and attempting to understand the material and I don't always get full credit for assignments.
- 5 I learned way more during the course than I thought I would. I knew very little about HTML and Java Script before this class and I didn't even know what CSS was. Despite that, by the end of the class, I now have the ability to make a functioning webpage from scratch! I was shocked at how quickly and effectively he was able to teach the material. I feel like I got a lot out of the class.
- 6 My professor was very kind and open to questions and always helped me (consistently providing personal assistance) when I needed it.
- 7 I think Mr. Yarnetsky was the most understanding and helpful teacher I had this semester. He was always free for one on ones and gives up so much of his free time for people who don't understand.
- 8 n/a
